                         * NOTE: This is a 'working draft' sequence. It currently consists of 21 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Direct Submission

Work on the sequence is in progress and the release of this data is based on the understanding that the sequence may change as work continues. The sequence may be contaminated with foreign sequence from E.coli, yeast, vector, phage etc. Order of segments is not known; 800 n's separate segments. * consists of 48 contigs. The true order of the pieces
* is not known and their order in this sequence record is
* arbitrary. Gaps between the contigs are represented as
* runs of N, but the exact sizes of the gaps are unknown.
* This record will be updated with the finished sequence
* as soon as it is available and the accession number will
* be preserved.

This sequence encodes the protein of the invention is a beta-2 adrenalin receptor subtype with Kd value of approximately 75 pM against 1251-cyanopindrol. The protein can be used in screening for agonists and antagonists, which are useful in researching asthmatic diseases.

pr Diagnosing asthma patients predisposed to adverse beta-agonist preactions upon regular administration - by identifying patients protections upon regular administration - by identifying patients protection protection beta2-adrenergic receptor protein Disclosure; Page 33-35; 46pp; English.

PS Disclosure; Page 33-35; 46pp; English.

PS Disclosure; Page 33-35; 46pp; English.

PS CC (CC This cDNA sequence codes for human beta-2-adrenergic receptor seek to comprises; (a) identifying an arginine residue at position 16. A novel method cc disclosure; Page 33-45; 46pp; English to adverse responses to comparise to the deta 2-adrenergic receptor gene, and (b) cc classifying an individual as susceptible if first and second cc alleles both encode Arg at residue 16 of the beta 2-adrenergic receptor gene alleles may be condition of the seta 2-adrenergic receptor gene alleles may be condition (see also v52615-17). Identification of PCR amplification (see also v52615-17). Identification cc comprises determining nucleotide sequences of these portions (e.g. cnounted sequence encoding residue 16, and optionally also cc comprises determining nucleotide sequences of these portions (e.g. by automated sequence analysis). The invention identifies a known cc polymorphism in the beta 2-adrenergic receptor gene as being linked to adverse responses to regular beta-agonist administration; condition is of the encoded protein can be either Arg or Gly, and conditional bomozygous for Arg16 are more susceptible.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   RESULT

Transcriptional Court Transcriptions thuringiensis insecticidal proteins Claim 1; Page 7; 9pp; Japanese. Q70084 is a transcriptional control sequence isolated from Bacillus Q70084 is a transcriptional control sequence isolated for the expression of Bacillus thuringiensis insecticidal proteins. The isolation of this sequence allows the development of a host vector system in Bacillus thuringiensis and creation of highly insecticidal strains. The new strains created in this way are not recombinants, the insecticidal proteins produced using Bt as a host can be applied in agriculture.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              WO9839477-A2.

Specifically, sequences which are likely to encode antigens have been identified and these polypeptides can be used in a vaccine composition against S.aureus infection. The polypeptides can also be used in a kit for the immunodetection of S.aureus in a sample. S.aureus is implicated in numerous human diseases, including cellulitis, eyelid infections, food poisoning, osteomyelitis, skin and surgical wound infections, scalded skin syndrome, toxic shock syndrome, etc. Organisms transformed with the DNA sequences can be used for recombinant production of the polypeptides. The new DNA sequences (and their fragments) are useful as primers or probes for isolating homologues of any of the S.aureus DNA sequences contained on the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        anti-S.aureus vaccines
Claim 1; Page 1956; 3271pp; English.
This sequence represents one of 5191 Staphylococcus aureus DNA sequences
of the invention. The DNA sequences are recorded on a computer readable
medium, preferably selected from a floppy or hard disk, random access
memory (RAM), read-only memory (ROM) or CD-ROM. Homology searches using
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Staphylococcus aureus contig SEQ ID #1435.

Stealth virus nucleic acid molecule - useful to detecting stealth virus, e.g. in chronic fatigue syndrome diagnosis

Example 5; Fig 1; 82pp; English.

V10141-V10210 represent nucleic acid sequences obtained from a patient with a stealth virus infection, namely chronic fatigue syndrome (CFS). Such nucleic acid sequences can be used to detect the stealth virus in medical, veterinary and agricultural diagnostics and in industrial and pharmaceutical biological quality control, e.g. to diagnose a disease associated with the stealth virus.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      with antibacterial action. These vaccines and antibodies would protect a host against invasion by S. aureus, and conditions relating to Staphylococcal infection, e.g. Staphylococcal food poisoning, scaled skin syndrome, and toxic shock syndrome.

The present sequence encodes a Staphylococcus aureus protein unknown function. The present sequence was isolated from a library of clones of S. aureus WCUH 29 in Escherichia coli. I sequence can be used in the construction of ribozymes and ant sequences to control the expression of Staphylococcal genes.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            21-AUG-1997.

Stealth virus contained in MRC-5 cell line, ATCC number VR2343 - is useful as a vaccine against chronic fatigue syndrome Disclosure; Fig 1A; 99pp; English.

V11954-V12024 are plasmids which contain fragments of a stealth virus isolated from a patient, D.W. Such stealth virus fragments can be used as vaccine against chronic fatigue syndrome (CFS). This illness causes unexplained fatigue lasting more than 6 months and greater then 50% reduction in an infected persons normal level of activity. The virus causes a cytopathic effect (CPE) to fibroblast cells observed in culture, characterised by the appearance of rounded, slightly enlarged, refractile cells in the culture.

Strike sequence is that of a coding region isolated from S. pneumoniae. Its encoded protein, or agonists of it, may be useful as an antibacterial for treatment or prevention of infection, specifically caused by S. pneumoniae (particularly meningitis) but possibly also Helicobacter pylori (ulcers and gastric cancer). It may be of particular use before insertion of an in-dwelling device or any other invasive procedure. The protein, or nucleic acid encoding it, can also be used in vaccines to induce a cellular and/or humoral immune response, or to screen for other that are potential sources of control elements for bacterial gene expression. Detecting a sequence encoding the protein can be used diagnostically, egents.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  760567-T60571 represent cotton fibrous tissue genes of the invention. These sequences are specifically expressed during the growth of cotton fibre. The genes were isolated from the polya RNA of the ovules of a cotton flower of Gossypium barbadense, and G. hirsutum. These sequences, and vectors containing them are used in the preparation of cotton transformants, with improved cotton fibres and improved yield. Sequence 713 BP; 200 A; 131 C; 161 G; 221 T;

        pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                             Score

/note="Vector: pBluescript SK-; Site_1: EcoRI; Site_2:
/note="Vector: pBluescript SK-; Site_1: EcoRI; Constructed out
using Stratagenes 'UniZAP - cDNA synthesis kit'. cDNA
was constructed using an oligo dT primer/linker that
contains a XhoI site within it. Following ds cDNA
synthesis, EcoRI adapters were ligated to the blunt ends
and sample was digested with XhoI. The result is cDNA
and sample was digested with XhoI. The result is cDNA
with an EcoRI sticky end on one side and a XhoI sticky
end on the other. This cDNA was ligated directionally in
UnizAP arms. The vector is designed containing the
pBluescript sequence as well as lambda DNA and cDNA is
cloned within this pBluescript sequence. The vector was
cloned within this pBluescript sequence. The library
was grown in XLIBLUE MRF' cells and amplified. The library
was grown in XLIBLUE MRF' cells and amplified. The library
was excised by mass excision using Stratagens 'Mass
was excised by mass excision using Stratagens 'Mass
was excised by mass excision using Stratagens 'Mass
single stranded plasmids that are then packaged (by helper
phage) and secreted out of the host cell as phagemids.
SOLR cells were transformed with phagemids and the library
was plated out on LB-amp plates to select for
transformants, Approximately 1,000,000 colonies were grown
and recovered by using Quiagen Midi prep kit. 2 micro grams of
each library were used to transform DH10B cells by
electroporation."

Following ds cDNA synthesis, EcoRI adapters were ligated to the blunt ends and sample was digested with xhoI. The result is cDNA with an EcoRI sticky end on one side and a xhoI sticky end on the other. This cDNA was ligated directionally in UniZAP arms. The vector is designed containing the pBluescript sequence. The vector was cloned within this pBluescript sequence. The vector was then packaged using Gold glgapackaging extracts. Library was grown in XLDBlue MRF' cells and amplified. The library was grown in XLDBlue MRF' cells and applified. The library was excised by mass excision using Stratagens 'Mass excision kit' that uses exassist as a helper phage that releases the pBluescript sequence and circularises it as single stranded plasmids that are then packaged (by helper phage) and secreted out of the host cell as phagemids. SOLR cells were transformed with phagemids and the library was plated out on LB-map plates to select for transformants. Approximately 1,000,000 colonies were grown and recovered by using Qulagen Midd prep kit. 2 micro grams of each library were used to transform DH10B cells by electroporation."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            /clone="PEP_SOURCE_ID:PPU140116"

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               with a combination of EcoRI and EcoRI Methylase. Size selected DNA was cloned into the pBACe3.6 vector at the EcoRI sites. The ligation products were transformed in DHIOB electrocompetent cells (BRL Life Technologies). a 114 c 109 g 146 t 2 others
victors program: prostate, Vector: program (Pharmacia)
with a modified polylinker; Plasmid DNA from the
normalized library NCI_CGAP_Pr22 was prepared, and ss
circles were made in vitro. Following HAP purification,
this DNA was used as tracer in a subtractive hybridization
reaction. The driver was PCR-amplified CDNAs from a pool
of 5,000 clones made from the same library (cloneIDs
98568-986759, 1101192-1101959, and 1217928-1220615).
